Bogotá, Medellín and other major cities in Colombia are suffering several environmental emergencies due to the pollution produced by motor vehicles...among them the refrigerator trucks used for food transportation that produce 29 times more particulate matter and 6 times more carbon monoxide than an average modern truck.
Even though our milk production process from the recollection to the processing, makes our product one the purest in the market (50 times cleaner than our competitors) and the best one in the country, our consumers are exposed to a reality that affects their health on the daily basis. That’s why we decided go one step further of just having eco-friendly trucks, and take action to minimize the carbon footprint that is affecting the cities and people’s health.
WE PRESENT:

PURIFIER TRUCKS

OXYGEN AS CLEAN AS OUR MILK
We decided to transform our truck fleet, one of the biggest in Colombia, into **moving air purifiers** by installing cleaning technology in each vehicle.

That way, when we travel thousands of miles doing our daily deliveries across the country from The Guajira to Amazonas, not only we will take the best quality milk but also cleaner air.
We also invited journalists, opinion leaders and influencers to a visit of one of the food processing plants to see why our milk is the purest. The surprise was that we prepare a transparent Alpina truck experience to transport them so they could see by themselves the air cleaning technology in a memorable way. After that, we sent a press release and a gift to reinforce the initiative coverage.
In addition, in order to send a strong message against pollution in mass media we also installed purifier billboards

*We Installed the Billboards in the critical pollution points of each major city.*

We want the city’s air to be as clean as our milk. This billboard helps purifying the air as much as 1200 trees would.

We also transformed our Alpina Markets in places where people can breath an air **as clean as our milk** by installing purifier totems.
Through digital channels we invited our followers to breathe a better “digital air” by visiting the landing page we created and see the amount of clean air our Purifier Trucks and billboards produce.
All the traffic that this site received during the campaign was used to set Retargeting & Broad Audience campaigns from which we plan to reach all the users that could be loyal consumers. As a Store Visiting strategy we designed ads that will be promoted through geolocation and will invite our users that are within walking distance from our stores to experience an space as clean as our milk.

We split the digital strategy in 3 phases so we could optimize the reach and measure the ROI and the digital impact.

*Proyecciones realizadas basadas en los intereses y público objetivo de la marca con una audiencia potencial de 30'000.000 de personas
Results:

27 journalists, 8 opinion leaders and 10 influencers experienced an unforgettable day in a purifier truck.

Over **USD357,000** on earn media.

More than **8'000,000** impressions reaching **3'000,000** people.

Approximately **1,600 Leads from potential clients** on social media registrations.

**847** users purified their days with the POP experience.

**And the most important...**

Between trucks(250) and billboards(9) **we cleaned 181'300,000 m³** of air, just in the first week.

Now we are closer to our goal, an air quality as good as our milk's.
Challenge:
Demonstrate to milk consumers that our’s is 50 times cleaner than our competitors and with higher quality.

Finding:
In Bogotá, Medellín and other cities from our country pollution alerts have become more frequent in the last years.

Idea:
We decided to transform our truck fleet, one of the biggest in Colombia, into moving air purifiers. That way, when we travel thousands of miles doing our daily deliveries, not only we will take the best quality milk but also cleaner air. In other words...

Oxygen as clean as our milk
